## **VirtualTone Communication Solutions Introduces our new VTONE FIREWALL**

*VirtualTone is the ideal solution to give companies with multiple offices, multiple locations and staff the same features as a large company with space to grow*

**ALVIN, TX:** VirtualTone, a voice and video communications solution provider, introduces its latest solution for the Small Medium Business community—VTONE FIREWALL. We have combined our small business class firewall economics with our business class capabilities to ensure the best possible experience. The VTONE FIREWALL is compatible with all VirtualTone devices and solutions. It protects a business from threats, regulates network traffic for quality of service, and keeps critical applications running without sacrificing network performance.

“We live and work in a digital world,” says Jay Gubert, Vice-President of VirtualTone. “Many companies run their business from mobile devices. Social networks, cloud-based applications, and intrusions mean that securing their business is crucial. Companies may deal with outside attacks or their own employees may unknowingly threaten the company systems by opening and downloading viruses.”

VTONE FIREWALL Business Class Firewall is pre-configured to make setup a breeze and offers the fastest, most comprehensive and cost-effective solution to keep business safe and keep mission critical applications running.
